Glydways is a
revolution in better
public transportation.

Our Purpose

To better lives
and communities
with better
transportation.

About

About Glydways

Glydways is an on-demand public transportation system that moves riders in autonomous, personal Glydcars on dedicated lanes that require less space, cost radically less and moves more riders than other available options.

The Glydways Network

The Glydways Network is an on-demand public transportation system that moves passengers directly to any destination in the mesh network without stops, in personal and autonomous Glydcars. The Glydways System is modular and designed to be expanded to create a mesh network that provides access throughout a city. Our infrastructure is a lower cost to build than roads and rail and makes the best passenger experience available to more communities.

The Glydcar

The Glydcar is a personal vehicle designed for public transportation. Glydcars autonomously move in dedicated lanes, carrying up to 4 passengers directly to their destination with no stops.

Glydcars are designed for passengers with space for all of the things passengers need, like bikes and luggage, without wasted space for things like trunks and hoods. Because we are building for every citizen, Glydcars are fully ADA compliant, with room to comfortably ride with a wheelchair.
